**BIG YIELDS -
GOOD COB MATURITY**

-  **Very high yielding**
-  **Stable performance**
-  **Drought tolerance on thin soils**
-  **Good grain maturity on**
-  **longer season plant**

Grainseed Ltd.

APOSTROF

BIG YIELDS - GOOD COB MATURITY

Cob Ripeness

Very large cob with high number of grain sites, 20% more than NK Bull (Maizetech trials oversite mean). Early grain maturity for longer season variety.

Maturity Group

Good grain maturity along with early dry down means Apostrof finishes very well for its maturity group.

Quality & Digestibility

220,000 Mj/ha out performing most group 5-7 maturity varieties. Good grain maturity ensures good starch yields so high quality silage is clamped.

Plant Description

Tall conventional plant with erect green leaves. Early dry down as crop matures towards harvest ensures good levels of dry matter are clamped.

Yield

Sow at 45,000 seeds per acre | 111,000 seeds per hectare
Stable high level of yield across all sites and seasons.
Performs very well on light soils. 113% dry matter yield
Maizetech trials at Petworth, Sussex.
